

PRESS RELEASE

NEW MAGNET DESIGN DEVELOPS EXTRA POWER

A totally new concept in magnet design and construction has enabled Geeplus to develop a voice coil motor which develops between 30 and 40% more force than devices using a similar coil.

The steel flexure bearing designed by Geeplus and used in the device aids fast dynamic response and greater acceleration due to zero friction during operation. Hysteresis is considerably reduced through the use of a flexible circuit and the flat, flexible terminal provides easy electrical connection.
